(54) METHOD FOR DRIVING LIQUID CRYSTAL ELEMENT	
(57) Abstract:	PROBLEM TO BE SOLVED: To display an image with a proper gradation by resetting the preceding display state even with a simple circuit configuration. SOLUTION: As shown in Fig. 1(d), the method for driving a liquid crystal panel relating to this invention is to display an image with a gray scale in accordance with a data voltage V_D by applying a data voltage V_D to the liquid crystal, and a reset voltage V_R , to be applied directly before the data voltage V_D , is defined as the one of overlapping a certain voltage V_a on the data voltage V_D . Such a reset voltage V_R can be applied without arranging a dedicated element, thus an image with a proper gray scale can be obtained.
